MSOT - Data Structures - Viva Question Paper

Time: 5 minutes Max marks: 100

Answer all questions orally.

1. What is the difference between an array and a linked list? (5 marks)
2. Explain how a hash table handles collisions using chaining or open addressing.
3. Why is a heap better than a sorted array for a priority queue?
4. Compare quicksort and merge sort. When would you use each?
5. Suppose you must find the shortest route between two stations in a metro map. Which data structure and algorithm would you use?
6. Define a binary search tree and the property it maintains.
