MSOT - Database Management Systems - Viva Question Paper

Time: 15 minutes Max marks: 100

Answer all questions orally.

1. What is normalization, and why do we normalize tables? (5 marks)
2. Explain the difference between a clustered and a non-clustered index.
3. Why can adding too many indexes slow down writes?
4. Compare optimistic and pessimistic locking. When would you use each?
5. Suppose two users book the last seat on a flight at the same time. How would you prevent both bookings from succeeding?
6. Define the ACID properties of a transaction.
